

Facial Plastics

Blepharoplasty is an operation to rejuvenate either the upper or lower eyelid tissue that can impart an aged or weary look and, in extreme cases, may impair vision. When assessing for a blepharoplasty, there are a number of important factors of which to be aware. Frequently other surgical procedures such as a browlift or fat augmentation around the eye are required to gain the fullest aesthetic benefit.

With the help of Brandon Hitchcock you can rebuild confidence and look your best.

We cater for both men and women.
